## CAPTURE FILE COMBINER DISK

This disk contains a program to join all files that are touching on your CAPTURED program disk. To use it, you must use the name supplied when your program was "CAPTURED". For example, when the name was requested by CAPTURE, you typed in "ABCD". The disk would then contain a group of files with ".ABCD" preceded by two characters before the period.

1. Capture your program to disk in the normal manner
2. From Capture main menu type 5 <return>
3. Insert file combiner disk in your disk drive
4. Type C <return>
5. Type "Y" if you have a 1541 or 1571 drive, otherwise type "N"
6. Type in the name as above and a carriage return

Disk operations will be carried out automatically. When the process is complete, you will be returned to the Capture main menu.
