

DIGITAL VISION

Digital Vision, Inc. 14 Oak Street - Suite 2 Needham, MA 02192 (617) 444-9040

Dear Customer:

Do you use an image handling product such as Flexidraw, Print Shop, Koala Pad, Newsroom, or Doodle! to process images on your Commodore? If so, then you'll definitely be interested in our compatibility System Software enhancements for your COMPUTEREYES video acquisition system. If you don't own such a product, you might want to consider purchasing one, as they are a very powerful yet friendly means of creating and modifying images (such as those that you acquire with COMPUTEREYES). Digital Vision is offering five low-cost software enhancements for COMPUTEREYES.

The Print Shop-compatible software allows you to capture images that can be used with all of Print Shop's modes. This includes full-screen images compatible with "Screen Magic", but, more importantly, you can also capture Print Shop "Graphics". This means that you can include your own images on letterheads, greeting cards, signs, and banners!

The Newsroom-compatible software lets you capture and save images that are Newsroom "Photos", which allows you to include your own images in the newspapers, newsletters, etc. that you design with Newsroom. No longer do you have to stick to Newsroom's supplied Clip Art! The software also lets you convert images from other programs, such as Flexidraw, to Newsroom "Photos"!

The Koala Pad-compatible software allows you to acquire images containing five levels of solid grey tones (black, white, and the three Commodore greys). They are very nice! The images can then be saved to disk and loaded into the Koala software, where you can change colors, add things, do touch-up, or print using Koala Printer.

The Flexidraw-compatible software allows images to be saved to disk in either the standard format, which is compatible with the main portion of Flexidraw, or in the Flexidraw Pen Palette format using the Commodore's true greys. Images may then be modified, colored, or printed using the very powerful Flexidraw package.

The Doodle!-compatible software features five capture modes for image acquisitions: the Normal, 4-Level, and 8-Level modes similar to the standard software plus two grey scale modes acquiring images containing all five of the Commodore's available grey levels. Images saved on disk using this package may then be easily manipulated or printed using the Doodle! program.

Each System Software enhancement comes on disk with a users manual. In keeping with our commitment to quality and value, each is available to COMPUTEREYES owners for just \$15.00 (US). Your COMPUTEREYES Dealer should be stocking all of the System Software Enhancements, or you can order direct (please specify your computer type, which enhancement(s) you'd like, and add \$1.00 shipping).

Thanks for your interest and support.
