SkiWriter II

The Communicating Word Processor

COMMODORE 64™
CARTRIDGE

“The new standard for word processing software!” —InfoWorld

The first telecommunicating word processing system!

* **It's two ingenious programs**—word processing and thoroughly integrated telecommunications—all on one convenient-to-use ROM cartridge.

* **No other home word processor is as easy to use.** All Ski Writer II functions are identified by clearly labelled keys and plain English menus. There are no complicated control codes to memorize, no commands to type!

* **It's always ready to use,** because it's on a program cartridge. (Loading another word processor or terminal program from disk or cassette can take 4 or 5 minutes!)

* **SkiWriter II is the undisputed leader** in editing, printing, and telecommunicating—in every possible word processing function!

* **No other program comes close to SkiWriter II's speed** or its ahead-of-the-art design that includes automatic word-wrap and re-formatting, on-screen underlining, boiler-plate capability, Lotus-like management, and much more!

* **Real word processing power for the whole family!** From grammar school book reports to college term papers, from graduate theses to business letters and resumes, SkiWriter II is designed to meet all the needs of the home computer user!

* **SkiWriter II was written by Ken Skier,** whose career includes major contributions to the development of the Wang word processor and the Epson HX 20 Notebook computer. He is the author of several books and numerous articles for *Byte*, *Popular Computing*, and other magazines.

Congratulations!

As the owner of SKIWRITER for the Commodore 64, you have at your command a complete word processing system and an intelligent terminal. With it, you can compose, edit, print and store documents with your Commodore 64, and then send those documents to other SKIWRITER-equipped computers, or to information utilities such as the Source and Compuserve, or to almost any computer you can dial up, anywhere!C
