

A COMPLETE HARDWARE & SOFTWARE SYSTEM

FOR THE **Commodore 64™**

VOICE MASTER™

A HIGH INTELLIGIBILITY
SPEECH SYNTHESIZER THAT ALLOWS
YOUR COMPUTER TO SPEAK IN "YOUR OWN VOICE"

COVOX INC.

MADE IN THE U.S.A.

VOICE MASTER™

REAL SPEECH SYNTHESIZER

VOICETM MASTER

REAL SPEECH SYNTHESIZER

Now your personal computer can truly be personal! Voice Master is a high intelligibility speech synthesizer that allows your Commodore 64 to speak in **your own voice**.

Adding speech to your programs is now easier than ever. To program a word, simply type **LEARN** and speak into the microphone. To say the word, just type **SPEAK**. Up to 64 different words or phrases can be stored in memory at one time and played back in any order.

Speech playback **does not** require the Voice Master digitizer because speech is re-created by the built-in music synthesizer of the Commodore 64. The digitizer is only needed for recording and editing your speech.

Besides speech, add animal grunts, laughter, "alien" talk, music, and other sounds and noises to your education and game programs. You can even sing! Design talking business programs, appliances, and telecommunication systems. Converse with your computer. Send messages to your friends who own a '64. Introduce yourself at the beginning of your programs.

Easy to create special effects such as echoes and speeded up or slowed down speech. Make your voice sound deep and low like a giant or high and squeaky like a chipmunk.

You can store the vocabularies on disk or cassette for later use. The length of the vocabulary is limited only by your imagination.

Nine new commands have been added to the BASIC language. Even beginners will have no trouble using Voice Master.

A sophisticated voice editing feature is built in, and it is very easy to use.

Voice Master can store speech entirely "behind" the operating system. This means that your program memory is unaffected.

Voice Master includes microphone, digitizer hardware, software package, and an instruction booklet that is tailored for both beginning and expert programmers.

Included are programs for a talking calculator and a talking alarm clock.

Voice Master is a major technological breakthrough that makes sophisticated digital signal processing easy to use and affordable.

Add word recognition software later on for voiced commands.

Comes with one year limited warranty. Details inside.

Operates with Commodore 64 computer. Requires T.V. monitor with audio output or monitor with audio. Otherwise requires separate audio amplifier and loudspeaker from external video port. Also requires disk drive or cassette player.

Now your personal computer can truly be personal!
